

**Figure 4 - figure supplement 4. Networks determined from pairwise tree distances.** Overall vRNA relationships corresponding to H1N1 viruses from 2000-2008 were assessed with UPGMA trees derived from the mean RF corresponding to Figures 4A (**A**) or the mean CID corresponding to Figure 4 - figure supplement 2A (**B**). Scale bar corresponds to either RF or CID. The point at which edges merge is equivalent to 1/2 RF or 1/2 CID.
