

Figure 3 - figure supplement 3. Networks determined from pairwise tree distances. Overall vRNA relationships corresponding to H3N2 viruses from 1995-2004 were assessed with UPGMA trees derived from the mean RF corresponding to Figures 3A (**A**) or the mean CID corresponding to Figure 3 - figure supplement 2A (**B**). Scale bar corresponds to either RF or CID. The point at which edges merge is equivalent to 1/2 RF or 1/2 CID.
