

**Figure 3-figure supplement 3.** Levels of US RNA and total HIV DNA in participants treated with ART regimens based on efavirenz (EFV), nevirapine (NVP), ritonavir-boosted atazanavir (ATZ/r), ritonavir-boosted darunavir (DRV/r), or ritonavir-boosted lopinavir (LPV/r) in the total pooled cohort. Units of measurement are: US RNA:  $\log_{10}$  copies/ $\mu$ g total RNA, total DNA:  $\log_{10}$  copies/ $10^6$  PBMC. Levels of significance were calculated by Kruskal-Wallis tests. Participant numbers per regimen are indicated below the graphs.
