CellSure-Human: Human Cell line Authentication Service

Report

Project ID:	M-1083
Service Code:	LC-M-321
Reference	PO No:
	Service Order Form Dated: 17/08/2016
Date	08/09/2016
Prepared For	Dr. Rashna Bhandari Laboratory of Cell Signalling, CDFD Laboratory building, Tuljaguda complex, 4-1-714, Mozamjahi Road, Nampally Hyderabad-500001
Prepared By	Gaurave Bhatt
Reviewed By	Jameel Ahamd Khan, PhD

Sample Information

Sample Type	Cells suspended in Transport Buffer
Sample IDs	1. RB-1
Shipping Method	Sample received through courier at room temperature
Receiving Date:	22/08/2016
Report submission date	08-09-2016

Methodology

The total cellular DNA was isolated using our standard protocol. For STR profiling, total ten Genetic loci viz: TH01, D21S11, D5S818, D13S317, D7S820, D16S539, CSF1PO, AMEL, vWA and TPOX were PCR amplified by labelled primers specific to repetitive loci. The labelled amplicons were resolved by capillary electrophoresis and alleles were called. The sample genotypes were compared with reference STR genotypes available in ATCC®, DSMZ® and Biosample databases to authenticate sample identity and check for cross contamination.

Results

Genotypes:

S. No	Sample ID	Cell Line Name	Ref Db ID		D5S818	D13S317	D7S820	D16S539	vWA	TH01	AMEL	TPOX	CSF1PO	D21S11	% Match with Ref.
1.	RB-1	U-2 OS	HTB-96	Ref. Genotype (ATCC & Biosample)	11	13	11, 12	11, 12	14, 18	6, 9.3	X	11, 12	13	31	
				Sample Genotype	11	13	11, 12	11, 12	14, 18	6, 9.3	X	11, 12	12, 13	31	93.75
2.	Pos Ctrl	2800M	-	Ref. Genotype (Promega)	12	9, 11	8, 11	9, 13	16, 19	6, 9.3	X, Y	11	12	29, 31.2	
				Sample Genotype	12	9, 11	8, 11	9, 13	16, 19	6, 9.3	X, Y	11	12	29, 31.2	100

Comments:

1. **RB-1:** The STR marker profile of the sample matches with **93.75 % markers** of reference marker profile of U-2 OS (ATCC ID: HTB-96) cell line in NCBI-Biosample and **93.33% markers** in ATCC database (please also see additional data). According to ATCC guidelines >80 % match **may be considered to be authenticated.**

However, it should be noted that the reason for not getting perfect (100 %) match is because of loss and/or gain of alleles at loci: CSF1PO (please see the highlighted markers in above table). This could be either because of sample from very high passage number or clonally selected cells, from a cell line of inherently very unstable genome. **For such cell lines, the STR profiling at regular intervals to check whether the current STR signature is maintained with increase in passage number of cells, is highly recommended.**

However, it may also be a potential case of cross-contamination and/or mislabelling and should be checked at a later passage especially if another cell line with related STR marker profile (please see DSMZ database search results in additional information) is being cultured in same lab. It may also be a laboratory developed cell line from patient samples which is not yet submitted in ATCC, DSMZ, JCRB and RIKEN databases and requires further characterization.
