

Figure 2, Supplement3

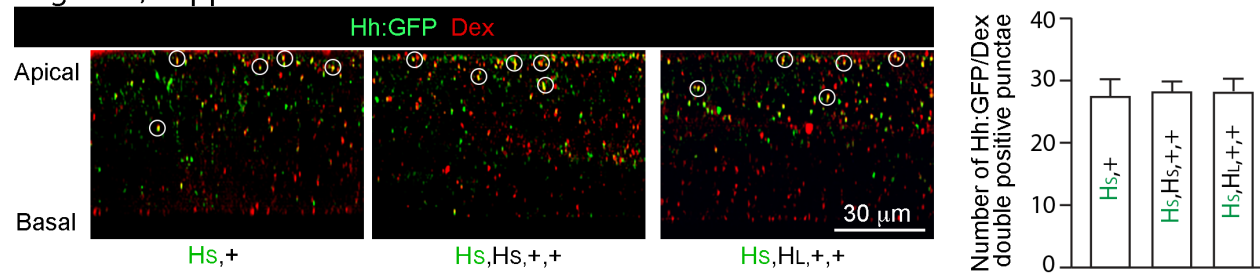

Figure 2-figure supplement 3. Dextran uptake in *hh* gene copy number genotypes Sagittal images from optical sections of wing discs with one *Hh:GFP* gene together with one, or three *hh* genes, following incubation with Red Dextran (MW 3000) and staining with α -GFP antibody. White circles indicate colocalization. Graph shows number of *Hh:GFP*/Dextran double positive punctae for indicated genotypes.
