

Figure 1, Supplement4

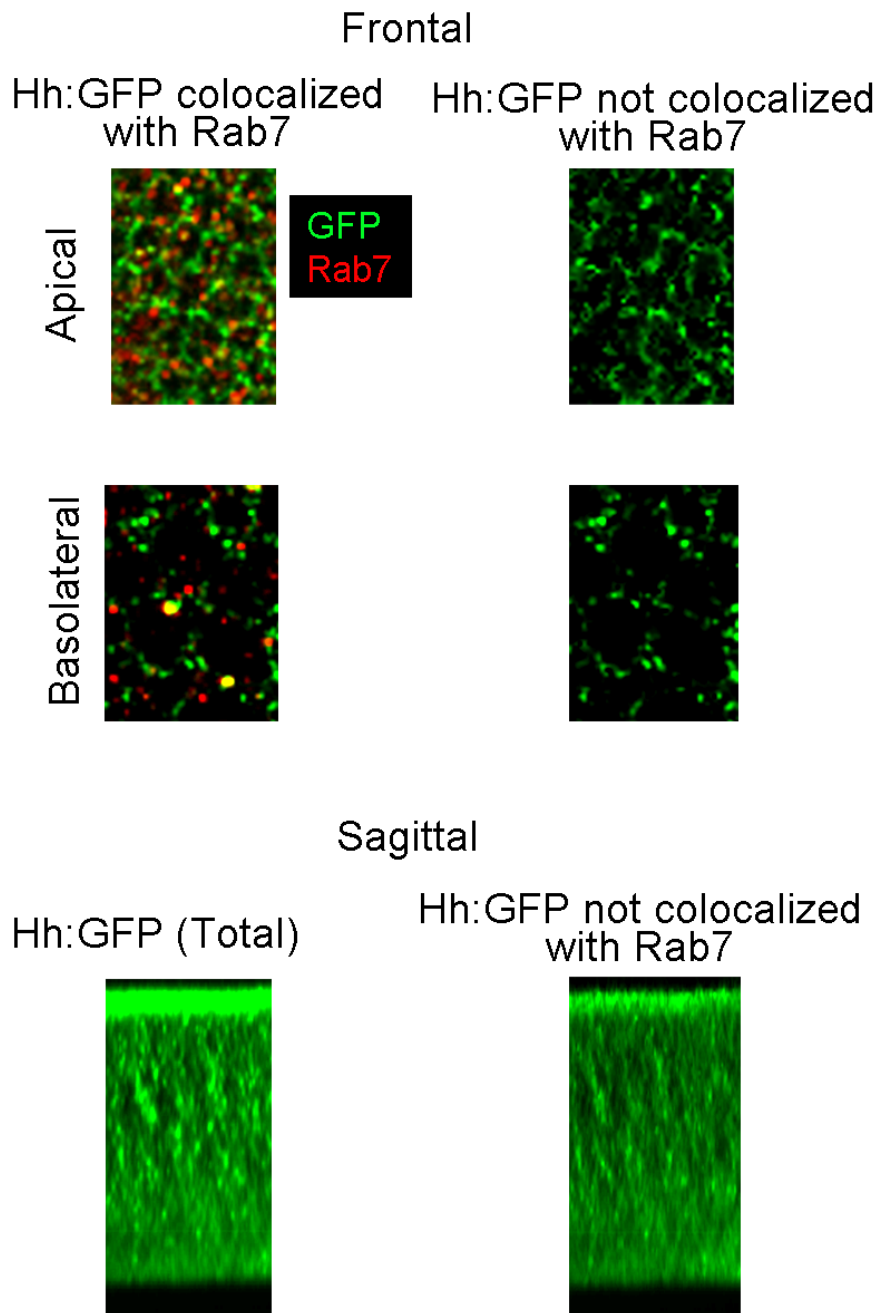

Figure 1-figure supplement 4. Colocalization of Hh and Rab7 in the wing imaginal disc.

Wing discs (Hh:GFP/+) were stained with α -GFP and α -Rab7 antibodies; frontal images from apical and basal optical sections (upper panels) shown with both α -GFP and α -Rab7 staining (left panels) and after removal of pixels with both red and green fluorescence using ImageJ. Bottom panels show images of sagittal projects of staining of Hh:GFP before (left) and after (right) removal of pixels with both red and green fluorescence using ImageJ
