

A. All parameters free (ΔAIC relative to varying lapse rate, lapse bias p_{common} , $p_{\text{choice}} = -241.8$)

B. Lapse rate, lapse bias p_{common} , p_{choice} are free with reliabilities fit individually (ΔAIC relative to fitting all reliabilities together = -24.8)

C. All parameters free and all reliabilities fit separately (ΔAIC relative to varying lapse rate, lapse bias p_{common} , $p_{\text{choice}} = -214.1$)
