

Figure 6- figure supplement 1

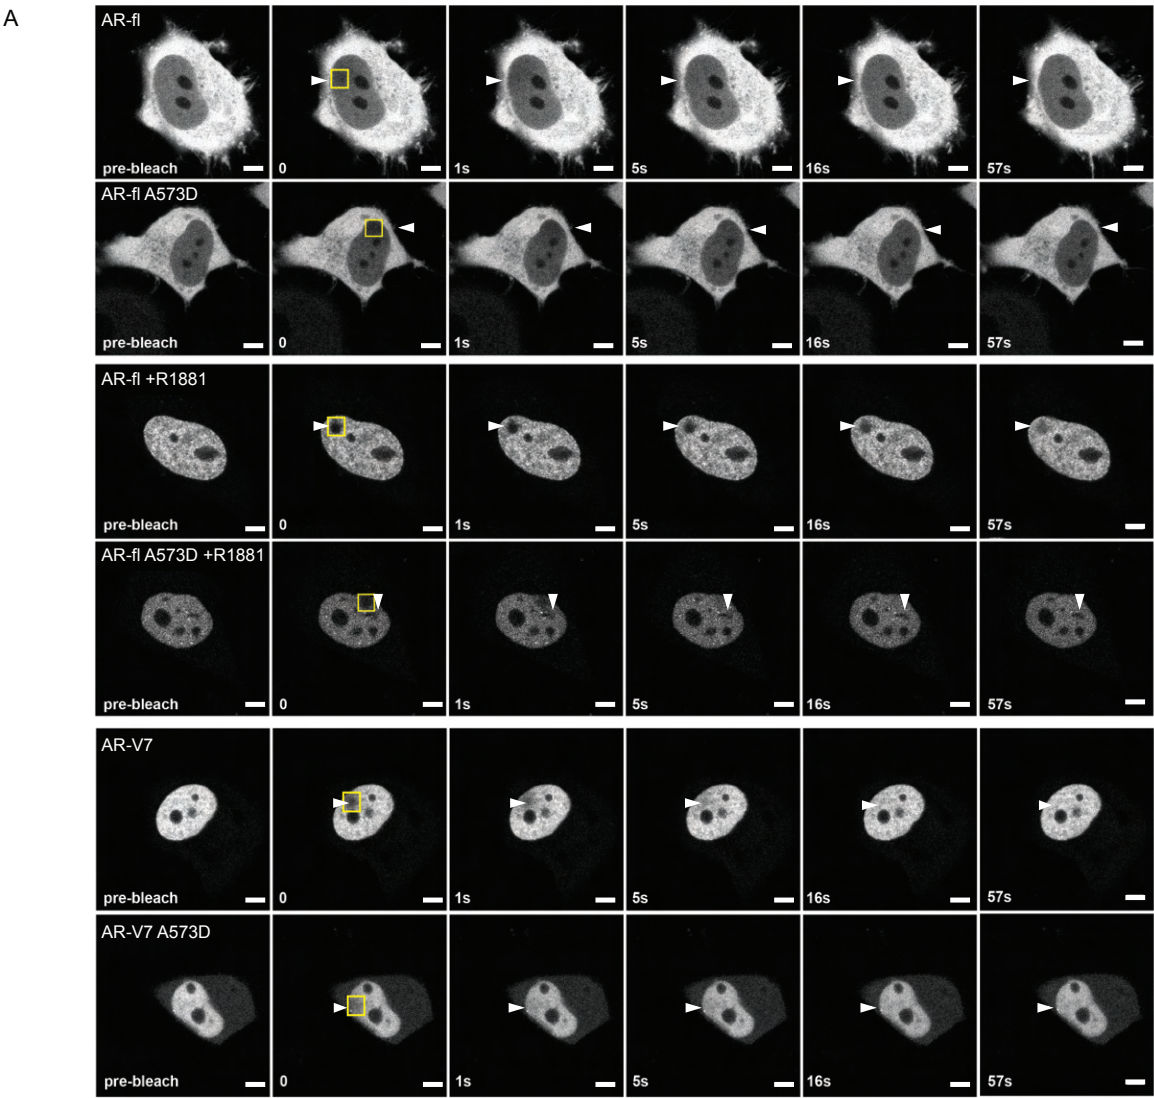

Figure 6- figure supplement 1. DBD mutation increases the intranuclear mobility of liganded-AR-fl and AR-V7. A. FRAP was performed in the nuclei of PC3 cells following transient expression of GFP-AR-fl or GFP-AR-fl A573D (in the presence of 10 nM R1881) or GFP-AR-V7 or GFP-AR-fl A573D. Representative images of cells at the indicated time points are shown. Arrow heads show the photo-bleaching area. Scale bar, 10 μ m. Experiments were repeated at least twice.
