

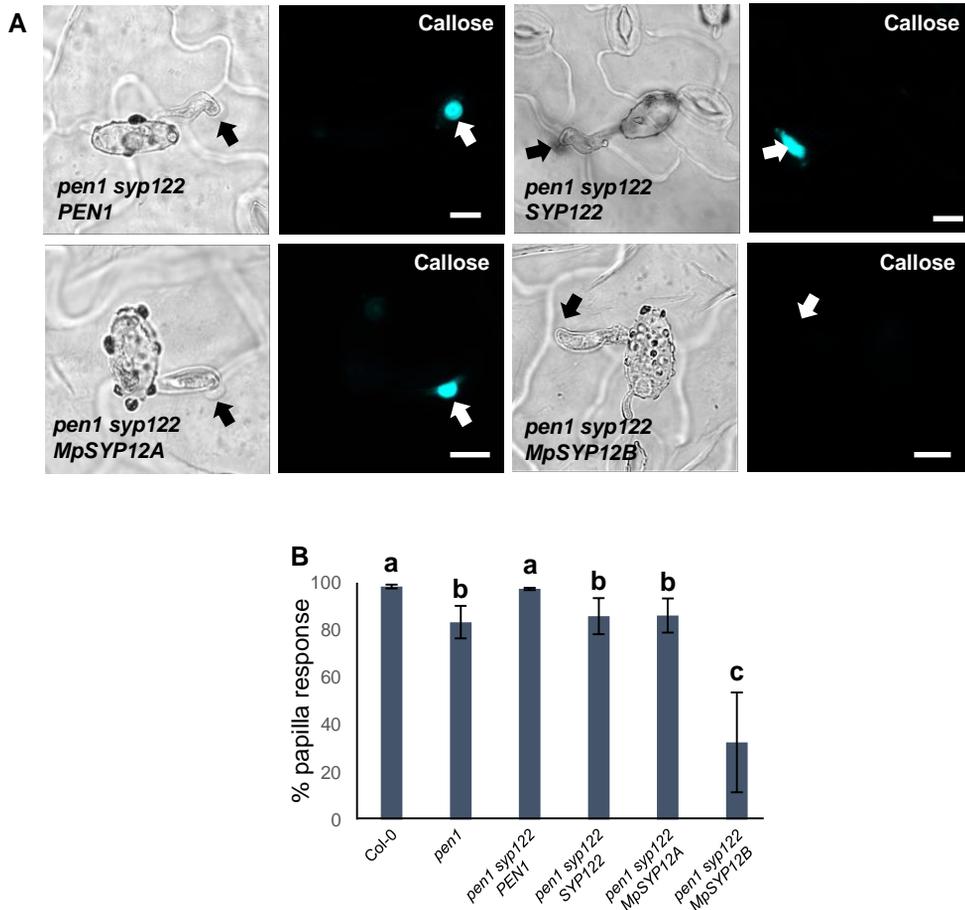

## Figure 8-figure supplement 2

### Figure 8-figure supplement 2. *Marchantia* syntaxis rescue papilla responses.

(A) Accumulation of callose in response to *Bgh* attack at non-penetrated (arrows) attack sites. Bars = 10  $\mu$ m. (B) Frequency of papillae in response to *Bgh* in non-penetrated cells. All values are mean  $\pm$ SD (n = 5 leaves per genotype). Different letters indicate significantly different values at  $P \leq 0.001$  estimated using logistic regression.
