

Figure 3-figure supplement 4

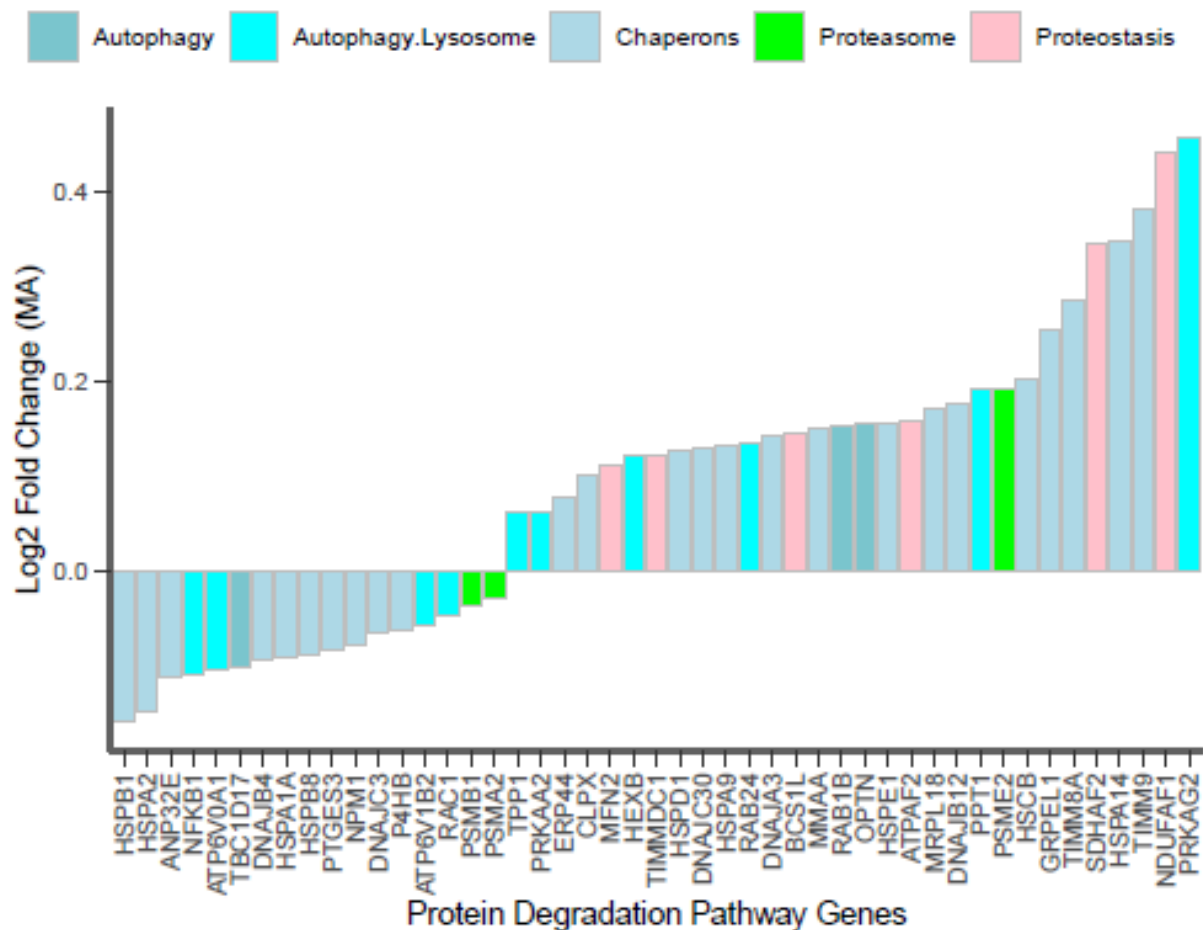

Figure 3-figure supplement 4: Autophagy lysosomal system, and ubiquitin proteasome pathway proteins. Expression of significant proteins from autophagy and proteasome pathways are shown for MA vs NA. Each bar is a protein with the corresponding gene name showing decrease in abundance to increase in abundance (left to right). X-axis is the protein, and Y-axis is the log2 FC of the MA proteins. Different categories of the autophagy, proteostasis proteins are color coded.
