

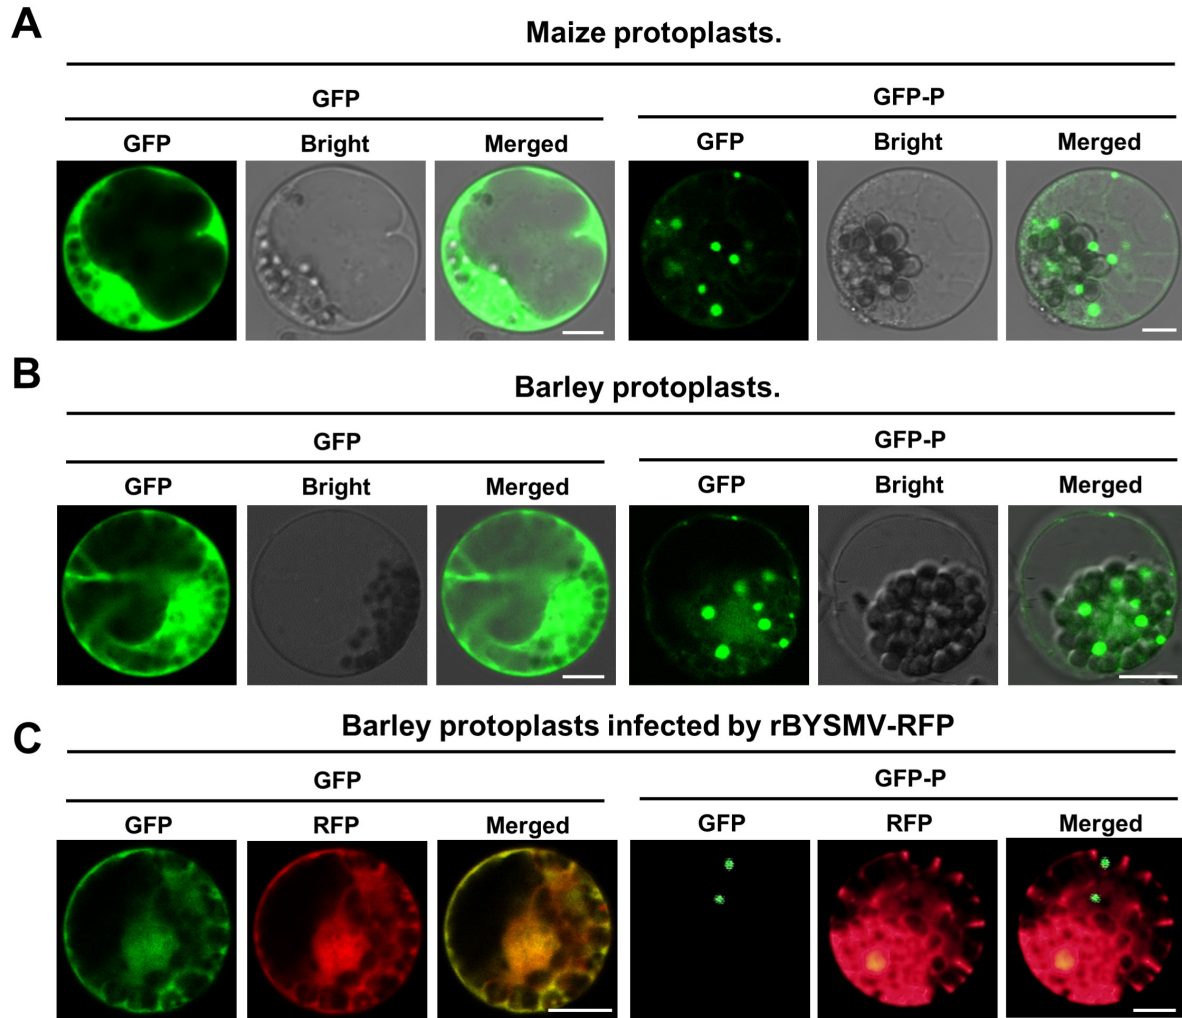

## Figure 1–Figure supplement 5

**Figure 1–Figure supplement 5. Phase separation of P protein in maize and barley protoplasts.**

(A) Confocal images showing subcellular distribution of GFP and GFP-P in maize protoplasts. Images were captured at 12–18 h post transfection. Scale bars, 10  $\mu$ m. (B) Confocal images showing subcellular distribution of GFP and GFP-P in barley protoplasts. Images were captured at 12–18 h post transfection. Scale bars, 10  $\mu$ m. (C) Confocal images showing subcellular distribution of GFP and GFP-P in barley protoplasts infected by rBYSMV-RFP. Images were captured at 12–18 h post transfection. Scale bars, 10  $\mu$ m.
