

**Figure 1-figure supplement 1. Purification of recombinant human SSTR2-Gαi1/Gβ1γ2-scFv16 complex.**

After injecting the complex sample into a size exclusion chromatography column, three peaks appeared. The complete complex of SSTR2, heterotrimeric Gαi1/Gβ1γ2 and scFv16 was eluted at the first peak around 11.25ml (shown in an SDS-PAGE).
