

Figure 2 - Supplement 2 - Individual data and FC model fit

The figure display one plot per participant, the “yes [the rubber hand felt like my own hand]” answers as a function of visuo-tactile asynchrony (dots) and corresponding FC (non Bayesian) model fit (curves) are plotted. As in the main figure, black, orange, and red correspond to the 0%, 30%, and 50% noise levels, respectively.
