

- Extracellular matrix organization
- Interleukin-4 and Interleukin-13 signaling
- transmembrane receptor protein serine/threonine kin.
- peptidyl-tyrosine phosphorylation
- plasma membrane bounded cell projection assembly
- pattern specification process
- negative regulation of immunoglobulin production
- positive regulation of cellular component movement
- organic hydroxy compound metabolic process
- NABA MATRISOME ASSOCIATED
- regulation of cellular carbohydrate metabolic process
- amyloid precursor protein catabolic process
- macrophage cytokine production
- epithelial cell-cell adhesion
- positive regulation of cytosolic calcium ion concentrat
- trabecula morphogenesis
- formation of primary germ layer
- Hypertrophic cardiomyopathy (HCM)
- Histidine metabolism
- cellular response to ketone
