

Figure 3 Source Data 1. Validation co-IP from inducible MB135 cells lines, anti-FLAG. Western blot showing anti-FLAG signal. “*” marks correct size band. Blot was physically cut to probe with multiple antibodies, multiple separate blots were imaged in this exposure/file. BOTTOM BLOT (boxed in green) was probed with anti-FLAG. Signal from ECL only appears in the chemiluminescence channel. Protein ladder appears in white light channel.
