

white light

chemiluminescence

**Figure 3 Source Data 10. Validation co-IP from inducible MB135 cell lines, anti-NCL.** Western blot showing anti-NCL signal. \* marks correct size band. Blot was physically cut to probe with multiple antibodies, multiple separate blots were imaged in this exposure/file. Blot was probed with anti-NCL. Signal from ECL only appears in the chemiluminescence channel. Protein ladder appears in white light channel.
