chemiluminescence

Figure 3 Source Data 12. Validation co-IP from inducible MB135 cell lines, anti-hnRNPU. Western blot showing anti-hnRNPU signal. * marks correct size band. Blot was physically cut to probe with multiple antibodies, multiple separate blots were imaged in this exposure/file. **BOTTOM BLOT** (boxed in green) is relevant for this figure and was probed with anti-hnRNPU. Signal from ECL only appears in the chemiluminescence channel. Protein ladder appears in white light channel.
