chemiluminescence

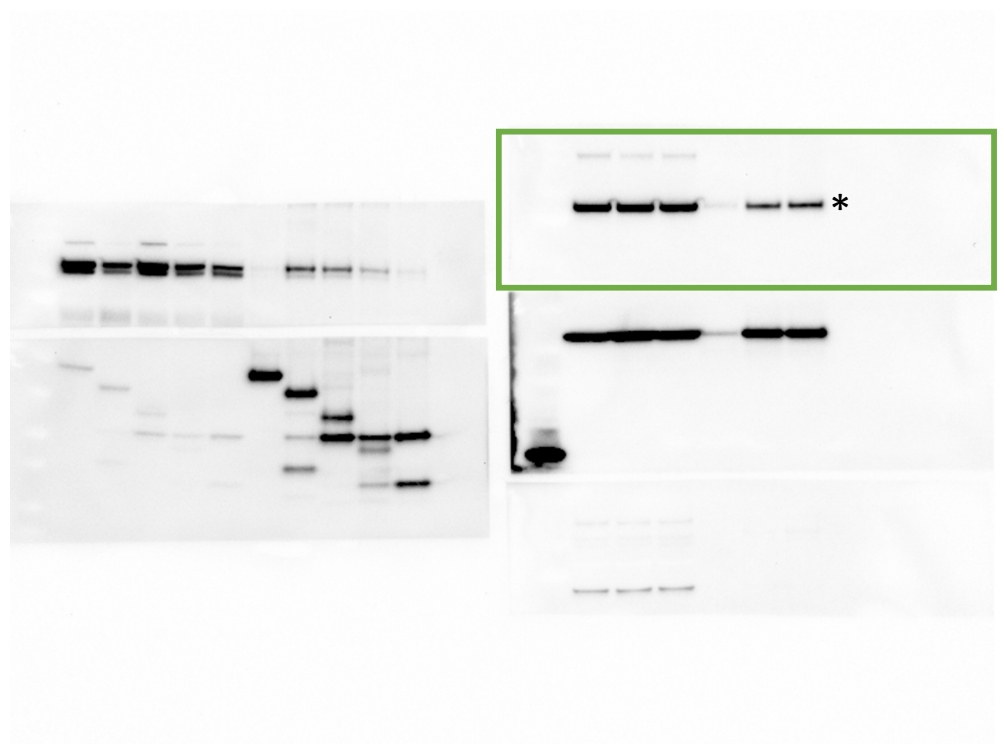

Figure 3 Source Data 2. Validation co-IP from inducible MB135 cell lines, anti-DDX3X. Western blot showing anti-DDX3X signal. * marks correct size band. Blot was physically cut to probe with multiple antibodies, multiple separate blots were imaged in this exposure/file. TOP RIGHT BLOT (boxed in green) is relevant for this figure and was probed with anti-DDX3X. Signal from ECL only appears in the chemiluminescence channel. Protein ladder appears in white light channel.
