

white light

chemiluminescence

**Figure 3 Source Data 3. Validation co-IP from inducible MB135 cell lines, anti-STAT1.** Western blot showing anti-STAT1 signal. \* marks correct size band. Blot was physically cut to probe with multiple antibodies, multiple separate blots were imaged in this exposure/file. MIDDLE BLOT (boxed in green) is relevant for this figure and was probed with anti-STAT1. The multiple bands represent the alpha (upper) and beta (lower) isoforms of STAT1. Signal from ECL only appears in the chemiluminescence channel. Protein ladder appears in white light channel.
