

Figure 3 Source Data 5. Validation co-IP from inducible MB135 cell lines, anti-YBX1. Western blot showing anti-YBX1 signal. * marks correct size band. Blot was physically cut to probe with multiple antibodies, multiple separate blots were imaged in this exposure/file. **BOTTOM BLOT** (boxed in green) is relevant for this figure and was probed with anti-YBX1. Signal from ECL only appears in the chemiluminescence channel. Protein ladder appears in white light channel.
