chemiluminescence

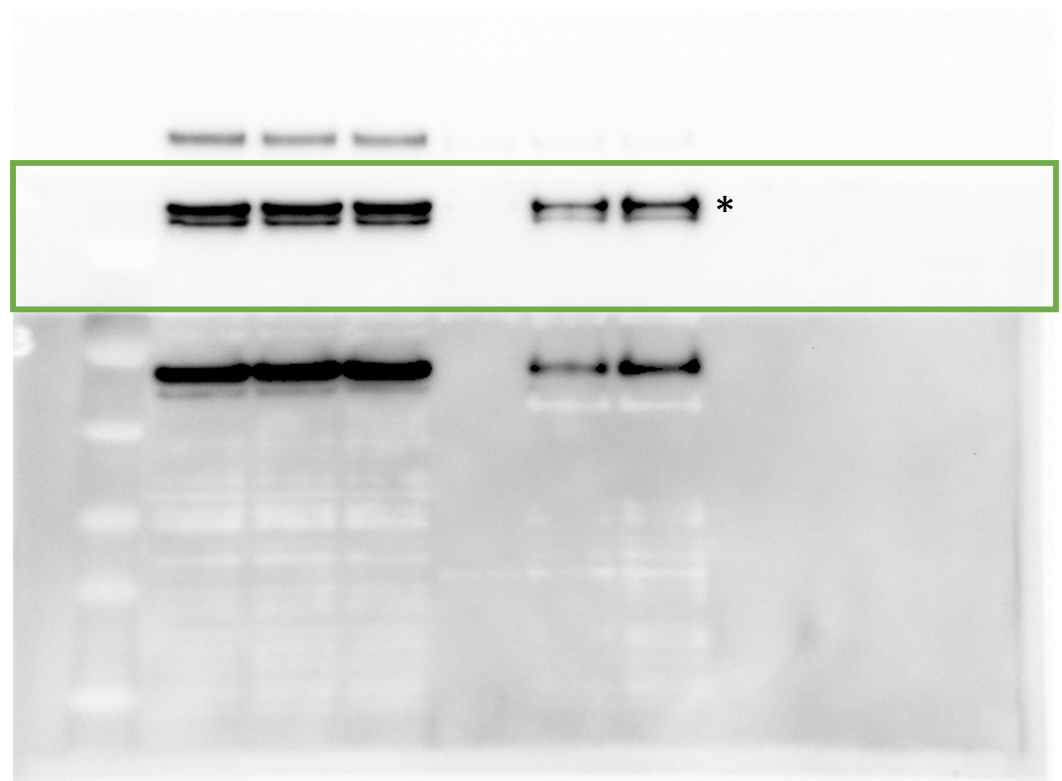

Figure 3 Source Data 6. Validation co-IP from inducible MB135 cell lines, anti-hnRNPM. Western blot showing anti-hnRNPM signal. * marks correct size band. Blot was physically cut to probe with multiple antibodies, multiple separate blots were imaged in this exposure/file. MIDDLE BLOT (boxed in green) is relevant for this figure and was probed with anti-hnRNPM. Signal from ECL only appears in the chemiluminescence channel. Protein ladder appears in white light channel.
