

Figure 4 Source Data 9. Co-IP from dual-inducible MB135 cell lines, anti-FLAG. Western blot showing anti-FLAG signal for Figure 4b. * marks correct size band. Blot was physically cut to probe with multiple antibodies, multiple unrelated blots were imaged in this exposure/file. LOWER BLOT (boxed in green) is probed with anti-FLAG to detect the INDUCIBLE FLAG-tagged DUXB or DUX4-CTD transgene. Protein ladder only appears in the “white light” exposure, signal from ECL only appears in the chemiluminescence channel.
