

**Figure 6 Source Data 1. Parental MB135 anti-CIC.** Western blot showing anti-CIC signal for Figure 6b. \* marks correct size band. Blot was probed with anti-CIC. NOTE: gel was loaded and transferred with samples ordered as labelled here. The image has been flipped in the manuscript and the labels flipped appropriately to mirror the protein layout in the Kitra-SRS experiment. Protein ladder only appears in the “white light” exposure, signal from ECL only appears in the chemiluminescence channel.
