

white light:

chemiluminescence:

Figure 7 Source Data 4. Mouse Dux co-IP, anti-FLAG. Western blot showing anti-FLAG signal for Figure 7b. * marks correct size band. Blot was physically cut to probe with multiple antibodies, multiple unrelated blots were imaged in this exposure/file. LOWER BLOT (boxed in green) is probed with anti-FLAG to detect inducible FLAG-tagged transgenes. NOTE: The image has been flipped in the manuscript and labeled appropriately. Protein ladder only appears in the “white light” exposure, signal from ECL only appears in the chemiluminescence channel.
