

Figure 4 - Supplemental Figure 2. Danger-specific behaviors during Session 2.

Mean \pm SEM percent behavior from 5s prior through 10-s cue presentation is shown for (A) port, (B) cup, (C) locomote, (D) jump, and (E) rear, danger (red), uncertainty (purple), and safety (blue). Adjacent plots show mean % change in behavior from baseline to last 5 s of cue presentation for all rats. Individual data points shown (females, black and males gray). \pm 95% bootstrap confidence interval does not contain zero.
