

Figure 2 – Figure supplement 1 – source data 2 – Panel C source data

Uncropped images of Western blots of full-protein worm extracts (50 worms per sample) to detect indicated transgenes specifically (anti-GFP) or both the transgene and endogenous HCP-1 (anti-HCP-1), as well as controls (anti-KLP-7). Bands of interest are indicated with a green box. Colored frameworks indicate the same membrane. Molecular weight ladder, Thermofisher prestained PageRuler.
