

2 SNSs/BC

3~ SNSs/BC

**Figure 13-figure supplement 2. The distance between multiple SNSs per BC (data from selection plates, 50, 100, and 200 J/m<sup>2</sup>)**

The position and type of each identified mutation per BC are presented in bar graphs for the cases of 2 (left-side graph) or 3~ (right-side graph) mutations per BC (233 bp, positions -19 to 214). Each single base substitution is indicated by a different color (legend on top). Data is combined from Lib10<sup>4</sup>\_#1 and Lib10<sup>4</sup>\_#2.
