

Figure 2 – figure supplement 2. Rad53 phosphorylation in the absence of Exo1 and Sgs1 is dependent on Rad9 and Rad24. Western blots for Rad53 phosphorylation (top) and corresponding Ponceau S staining (bottom) for the indicated strains. For *exo1Δ sgs1Δ rad24Δ*, two repeats of 0 and 4 h timepoints are shown. For *exo1Δ sgs1Δ rad9Δ*, two samples without DSB induction are shown (0 h). As a comparison, WT and *exo1Δ sgs1Δ* strains are included.
