

**Figure1-J-Source data 2.** Original membranes corresponding to Figure 1, panel J. Rainbow molecular weight markers were employed. Top: Detection of the target protein. Lane 1: RSV-free; lane 2: RSV-infected. Bottom: Corresponding  $\beta$ -actin loading control (lanes 1 & 2 match lanes 1 & 2 from the top panel). lanes 3 & 4: samples unrelated to this experiment. The antibodies used for detection are indicated on the figure.
