

Figure 4, Source Data 2. Original membranes corresponding to Figure 4, panel B. The left membrane correspond to laminin $\alpha 2$ chain, The right membrane correspond to GAPDH. Lanes with our internal codes correspond to homozygote knockout (KO), dy^H/dy^H (ΔExon 3) (lanes 1, 2, 3), and dy^H/+ (Het) (lanes 4, 5, 6. Rainbow molecular weight markers were employed.
