

Figure 3B-source data 1. Original membranes (highlighted by red rectangular frames) corresponding to Figure 3B. The upper and lower bands represented the expression levels of protein CheY-eyfp and the housekeeping protein  $\beta$ -actin, respectively, with bands from left to right indicating the corresponding protein expression profiles of six bacterial strains wild-type, mutant  $\Delta flhF$ ,  $\Delta fliG$ ,  $\Delta fliF$ ,  $\Delta fliF \Delta flhF$ , and  $\Delta motA \Delta motCD$ .
